

🕒 Quick Start Guide 🕒

Welcome to Commissions GPT.

This short and sweet guide will get you setup with the AI in minutes!

🔥🔥 You made a smart choice - now let's get going, in seconds 🚀

1. Accessing Everything - Members Area

To visit the **Commissions GPT members area**, log in to your WarriorPlus account, click your **username** in the red + click **"purchase history"**:

There you will find all the recent purchases you made on Warrior - including links to all the AI members pages (including any upsells).

2. Getting Started With The Software

You will be able to access all the software tools. **To access Commissions GPT, simply create an account. Be sure to use the email address you purchased with on W+.**

3. Getting Updates To Commissions GPT

AI is constantly changing (in the last few weeks we have seen Stable Audio, Ideogram, Runway image-to-video, Photoshop AI, Dalle 3 and more!). I do regular updates to the core AI tools, free training videos on AI updates, and also webinars with new training and tactics.

To ensure you get access to all this, hit reply to my “welcome email”. I will send you a bonus AND it will ensure my email is whitelisted.

4. REQUIRED To Use Commissions GPT

Commissions GPT is a software that uses a complex sequence of tools to give Chat-GPT the ability to create software, ebooks, logos and ecovers. GPT does not innately have the ability to do any of this - but we handle all these calls on your behalf using various hidden third-party tools. However, there is one account you *do* need to setup and connect - and that’s Chat-GPT/OpenAI:

A) CONNECT TO CHAT-GPT

Commissions GPT connects to Chat-GPT, an AI that is owned by OpenAI. You will need an “API key” to use the tool. Therefore, if you don’t already have an account with OpenAI, you will need to do the following:

1. Create an account with them <https://platform.openai.com/account/api-keys>
2. Get an API key - <https://platform.openai.com/account/api-keys>
3. Insert the API key into the settings page of Commissions GPT and hit save
4. Then you have connected to the Commissions GPT. Done.

NOTE: You will get \$18 free credit the first time you set up your OpenAI API. Once this spent (or after 90 days), you will then be charged a very low amount by OpenAI for future API calls (and I *do* mean *low* - eg. creating a new software tool costs <\$0.01). If you are a *very very* heavy user of this tool, creating *dozens of software and ebooks* each day, you are still looking at *less than \$1 in monthly costs*. GPT API calls are cheap and we have set this up to be very cost effective. You can revoke, add and change API keys at any time - and check your spend on the “usage” page. Whether you are an eight-figure marketer or an IM newbie, I assure you: the OpenAI API key is *the most powerful thing in your tech stack*, so start using it now!

5. My “AI Tech Stack” - October 2023

OK here is my AI tech stack for October 2023, in the rough order which I use them:

1. **ChatGPT** - <https://chat.openai.com/chat>
I use this for a near-infinite range of purposes such as creating software, writing sales copy, and doing technical research. If you have \$20/month I would definitely upgrade to “Chat-GPT Plus” (click on “your account” on the

left) as it gives you access to GPT-4 which is the most powerful model & now also gives you GPT Plugins, Bing Browser (back in there after a two month hiatus), and soon.. Dalle-3 and Multi-Modal too! These will be game-changers, and it's difficult to see GPT losing its spot on the throne, unless there is a tectonic AI event we don't expect...

2. **RemixableAI** - <http://remixable.ai/>

My own software suite, which is now approaching \$300k in dev costs and basically automates every aspect of running a digital product business (either as an affiliate, Youtuber, list builder or product owner). This now has Chat-GPT fully integrated into the tool (for copywriting) along with 30+ training videos on AI. If you want to sell your own product this is indispensable. For example, Upsell 4 for SearchGPT lets you create unlimited AI graphics, and the wrap those graphics into software tools (thus creating unlimited software tool). I then used Remixable AI to make me an entire sales letter + video which you can preview here <https://remixable.net/ecover/> - this is made with Remixable, better than 90% of the pro sales letters you see on Warrior.. And yet *I'm not even bothering to sell it* (just including it as a bonus within Remixable). I really can't stress enough how much of a level up Remixable AI is for everything I do)

3. **MidJourney** - <https://www.midjourney.com/>

The top AI graphics tool. In September, we are *still* waiting on the web version, but they did push v5.2 of the app which has a very cool "zoom-out" + pan functions, allowing you to start with a portrait of a football-player (for example) and infinitely zoom out to see an entire stadium. MJ 5.2 also brought an even higher quality of images. I'm very impressed! 90% of the images on my site are done with MidJourney. It is simply the best tool for graphics out there. Only problem with MJ is the cost (\$10/\$30/\$60 per month although \$10 will suffice for most people). Honorable mention - <https://www.bluewillow.ai/> which isn't quite as good as MidJourney but works very similar, uses the same prompting system and has one big benefit - it's free! Leonardo AI is also excellent (<https://leonardo.ai/>) with some very very nice presets, and the ability to train your own image model with as little as 10x prompts. A shame that Leonardo didn't get to stick around in the top 10, but competition is tight!

4. **ElevenLabs** - <https://beta.elevenlabs.io/voice-lab>

The best AI voice generation tool right now. Clone voices, create voices from scratch. Extremely powerful - especially when chained with something like Remixable Copywriter VSL script > ChatGPT remix it to new niche > Elevenlabs voice-over > Remixable video > Remixable website, to make pages and videos like [this](#) in around 1-2 hours.

5. **Dalle 3-** <https://www.bing.com/images/create>

In the summer of 2022, Chat GPT was still six months away. But OpenAI's first big viral splash was "DallE", their image generation tool. Then came Dalle-2, and then at the end of September Dalle-3 dropped, albeit only available right now via Bing (login to your Microsoft account and hit the above link). So.. is Dalle better than MidJourney? In some ways.. Yes. It handles text 100x better (and almost as well as <https://ideogram.ai/> which is free, and best-in-class at AI logos and text). It is very good at ecovers (try prompt like "software ecover box with text "YOURPRODUCT" with robot icon"). It is also VERY good at turning weird text prompts into pics (since it is powered by Chat-GPT). Speaking of GPT, we are waiting for Dalle3 to appear inside of Chat-GPT (for plus users) any day now. Until then.. Use Bing Image Creator to play with Dalle.

6. **ClipDrop + StableDiffusionXL** <https://clipdrop.co/image-upscaler>

The simplest place to access Stable Diffusion's new "XL" model (text to image which is now close to MidJourney, although still a step behind). Also, though, Clipdrop has a whole suite of VERY useful AI image tools such as cleanup, text remover, remove background, image upscaler and more. Very often I'll get an image in MidJourney I love but it has text and a background I don't like - and MJ exports at 1024x1024. I will import into Clipdrop, remove the background, remove the text and then upscale the quality to 2000x2000.

7. **Runway ML-** <https://runwayml.com/> ***UPDATED***

Both video creation tools. Runway's "GEN-1" feature and [Kaiber](#) both let you upload a video (eg from a stock photo website like [Pexels](#)) and then enter a text prompt or image to style your video. Runway now pushed "GEN-2" which lets you do "text to video", creating an entirely new video from a few words! All my sales videos now use both Kaiber and RunWayML. Runway now also has "image to video" along with additional controls (zoom in/left/motion speed etc). Runway also also MANY different features I've barely had time to play with (like the green screen background removal and interpolation which merges images into a seamless transition). Also, Runway now has a VERY cool "image to video" function in its GEN2 tool which turns any image into a 4 second video. Then run the same video in its "slow motion" feature (at 0.33 speed) to create a high-res 12-second video (this also improves the resolution!). Runway dropped a place this week since some functionality is now in Canva, which has risen a place. Oh, and before I forget, for more text and image to video, check [Pikalabs](#).

8. **Canva AI + Magic -** <https://www.canva.com/> ***UPDATED***

Announced a whole suite of AI tools in a big "create" event in the summer, and then in early October 2023, integrated some more "photoshop-like" features (generative extend, animations, RunWay ML integration). VERY powerful when

combined with MidJourney (create in MJ, edit in Canva AI). Their “AI Image Editor” is exceptionally good and provides the 2nd best inpainting after Photoshop. Simply import an image, click “edit image”, choose the AI editor and then enter a command (eg “put glasses on robot”). AI feature only available with their pro plan (\$10 month) and it only allows 100 edits per day. Trust me, I found out the hard way! CanvaAI has now dropped a space (owing to Photoshop AI), but CanvaAI’s inpainting is still very good - just not on the insane level of Photoshop (plus its ⅓ the price of PS!). Canva is also 100x easier to use than Photoshop and so has now risen a space in my top 10 as a “newbie to intermediate user’s better alternative to Photoshop”. I am impressed at the Canva team’s obsession with product iteration, especially vis-a-vis AI!

9. **Adobe PhotoShop AI -**

<https://www.adobe.com/uk/products/photoshop/generative-fill.html>

A sudden entry to my top in the final week of May 2023, with the release of Photoshop AI (and specifically its “generative fill” feature). Simply highlight an area & type (“red hair”), and watch as the AI spits out three variation images. It’s also very powerful at extending an image. eg. take an AI image you made with MidJourney (or any stock photo), let’s say of a basketball-playing robot - then extend your image with an empty space either-side and type “basketball playing robots”, and watch as the AI extends your 1:1 image into a 3:1 masterpiece. Only downside? It’s \$30/month. But.. it does come with a trial. If you do any image editing though, this is an instantaneous must-have. It launched right in at #4 as soon as it went live, but has now been pushed down by MidJourney introducing a “zoom” feature with version 5.2 in late June. NOTE: Photoshop “AI” features are currently BETA - so you will need to get your trial and get the “beta” version of Photoshop to use GEN-AI features.. Note: if you work with “AI images”, like me, I recommend the AI tools here. But if you work with a lot of “real photo graphics” then Photoshop is great.

10. **StableAudio** <https://stableaudio.com/generate> ***NEW***

The latest tool from the “StableDiffusion” crew (the original text to image model). But this one lets you create royalty-free audio. Is nothing sacred to AI? No! Now you can create songs, beats, samples, sound effects even short acapella vocal sounds. I also use Facebook’s “AudioGen” and “MusicGen” although you will need to check HuggingFace for a “space” running that (I may soon be using these engines in our own tools, but for now check out Stable Audio!)

(PlaygroundAI <https://playgroundai.com/> + Leonardo AI- <https://leonardo.ai/> now knocked off the top ten! Last time to check them before they disappear for good from my list, although both may return as they are excellent tools!)

7. Getting The Best From AI In 2023

There are a number of AI tools that I use (well, I use them all!) But the two in particular I recommend are Chat-GPT and MidJourney. Also... Photoshop (image editing is vital for designers and image editors & ElevenLabs for content/sales videos (for voice). Plus,, LeonardoAI (images), PlaygroundAI (images), BlueWillow (images) & ElevenLabs have **free** plans. If you're on a budget, here are my recommendations...

SOMEWHAT LIMITED BUDGETS...

👉 "I have no money at all" - get Chat-GPT and use Bing Chat. If...

👉👉 "I can only afford \$20/month" - get Chat-GPT Plus and get BlueWillow or StableDiffusion/Clipdrop instead of MidJourney

👉👉👉 "I can only afford \$30/month" - get Chat-GPT Plus + MidJourney basic plan

SERIOUS ABOUT MONEY MAKING...

👊🤖👉 "I am serious about AI, and want the best" 👉 first get Chat-GPT Plus. Then get Remixable AI (see below). Next, get MidJourney. Next, get either Adobe Photoshop AI or Canva Pro (to access the AI inpainting and editing of images). Finally, consider Runway ML or Kaiber AI for video. Use all these tools & stay subscribed - I'm hearing of big updates later this summer! ☀️☀️

8. Final Thoughts

Be sure to check out **Remixable**, my marquee software.

Remixable is the all-in-1 software I used to build ALL pages + videos for Infinite AI! Everything was built with Remixable, Chat-GPT, MidJourney, ElevenLabs, CanvaAI, Dall-E, ETC.. Exactly as described in the Remixable training videos!

Basically, Remixable + AI is how I did ALL of the funnel!

- Check out [Remixable \(now with AI preloaded\) here](#)
- Check out the "[How I made \\$65k webinar here](#)"

OK, keep your eye on your email. Big updates dropping - October 2023 & beyond!

Thanks, Chris

P.S. Agent X ;-)
You heard it here first...
